Within a species, the vast

majority of nucleotides are identical between individuals, but sequencing multiple individuals is necessary to understand the genetic diversity. Mon, 10 Dec 2018 03:04:00 GMT Genome - Wikipedia - Genomics is an interdisciplinary field of science focusing on the structure, function, evolution, mapping, and editing of genomes. A genome is an organism's complete set of DNA, including all of its genes. In contrast to genetics, which refers to the study of individual genes and their roles in inheritance, genomics aims at the collective characterization and quantification of genes, which ...
